Word processing is almost always the first facility people use on the computer, and for many people it is the main reason for buying a computer. The tremendous flexibility of even the most basic word processors has ensured that they have almost totally replaced the typewriter. Word processors allow you to create and then amend parts of the document before printing so that you never have to ...

[ABC of medical computing. Choosing a computer system.](#)

General practitioners have been at the forefront of medical computing in Britain for the past 20 years. The first systems were developed by enthusiasts and were designed to collect epidemiological data rather than manage the practice, but in 1972 the Department of Health sponsored the development of a system that recorded consultations for the first time.
