The three goals of developmental psychology are to describe, explain, and to optimize development (Baltes, Reese, & Lipsitt, 1980). To describe development it is necessary to focus both on typical patterns of change (normative development) and individual variations in patterns of change (i.e. idiographic development).

Piaget was the first psychologist to make a systematic study of children's cognitive development. Piaget's theory included four distinct stages of development: The sensorimotor stage, from birth to age 2. The preoperational stage, from age 2 to about age 7. The concrete operational stage, from age 7 to 11, and....

[Key Concepts In Developmental Psychology](#)

Developmental psychology research is the scientific means of acquiring information about groups and individuals regarding various aspects of human development. A developmental psychologist begins a research study after developing ideas from a theory, or an integrated set of statements, that explain various phenomena. Because a theory is too general to test, the investigator devises a ...
