A LaTeX example. Suppose you have a LaTeX file: myfile.tex. Then, on a first pass through latex, an auxiliary file: myfile.aux is created. The command bibtex myfile causes BibTeX to read the .aux file looking for declarations of the bibliography style, bibliography data-bases (.bib files) and citations. For BibTeX to find such information, the file myfile.tex must contain the following commands:

The input file is just a plain text file, with the extension .tex. It will contain code that the computer interprets to produce a PDF file. The first line of code declares the type of document, in this case is an article. Then, between the `\begin{document}` `\end{document}` tags you must write the text of your document.. Note: To learn how to generate the output file see our article on compiling.
