MecMovies - Mechanics of Materials

Mechanics (Greek: μηχανική) is the area of physics concerned with the motions of physical objects. Forces applied to objects result in displacements, or changes of an object's position relative to its environment.This branch of physics has its origins in Ancient Greece with the writings of Aristotle and Archimedes (see History of classical mechanics and Timeline of classical mechanics).

Moment is the measure of the capacity or ability of the force to produce twisting or turning effect about an axis. This axis is perpendicular to the plane containing the line of action of the force. The magnitude of moment is equal to the product of the force and the perpendicular distance from the axis to the line of action of the force. The intersection of the plane and the
