Stress has been defined traditionally either as a stimulus, often referred to as a stressor, that happens to the person such as a laboratory shock or loss of a job, or as a response characterized by physiological arousal and negative affect, especially anxiety. In his 1966 book, Psychological Stress and the Coping Process (Lazarus, 1966), Richard Lazarus defined stress as a relationship between the person and the environment that is appraised as personally significant and as taxing or ...
