The Electronic Spark Control, also called the Knock Sensor, is an electronic device built by General Motors to help regulate the timing inside of the engine. When combustion inside the engine does not fire properly, a "spark knock" or abnormal vibration can occur.

### **Electronic Spark Advance**

The ESA (Electronic Spark Advance) system is a system that uses the engine ECU to determine the ignition timing based on the signals from the various sensors. The engine ECU calculates the ignition timing from the optimum ignition timing stored in memory to match the engine conditions, and then sends the ignition signal to the igniter.

### **Electronic spark advance - how does it work - RCU Forums**

Electronic Spark Advance Operation For maximum engine output efficiency, the air/fuel mixture must be ignited so that maximum combustion pressure occurs approximately 10°-15° after TDC. As engine RPM increases, there is less time for the mixture to complete its combustion at the proper time because the piston is traveling faster.
