Continuous-time signal: A signal which is continuous both in time and amplitude is called continuous-time signal. The continuous signal is a mathematical function of independent variable  $t$ , where the variable represents a set of real numbers. It is required that signals are uniquely defined in except for a finite number of points.. For example, consider the

continuous-time unit step signal as ...

This is a signals and systems textbook with a difference: Engineering applications of signals and systems are integrated into the presentation as equal partners with concepts and mathematical models, instead of just presenting the concepts and models and leaving the student to wonder how it all is related to the world of engineering.
