Exponents

The rest of the lesson will include a Guided Practice session of several applications of Rational Exponents in expressions. I always give students the opportunity to work on problems before we discuss them as a class. After rewriting a few in either radical or exponential form, we simplify basic rational exponents where the base is a number.

And we can extend this idea to arbitrary rational exponents. So what happens if I were to raise-- let's say I had, let me think of a good number here-- so let's say I have 32. I have the number 32, and I raise it to the $1/5$ power.

Students should be able to see that rational exponents are a combination of a power and a root. They should also be able to use the existing rules of exponents (our prior knowledge piece) to extend these concepts to rational exponents. I do an example or two on the board prior to giving the assignment.
