The aim of the book is to improve the evidence-based management to a child's infection. This new edition has short abstracts, key references, and key learning points which are now fully updated.

Recent immunisation campaigns have substantially reduced rates of serious bacterial infection in children yet

new and emerging infections remain a very serious concern.

However, repeated infection, particularly in the presence of VUR, is thought (but not proved) to cause renal scarring, which may lead to hypertension and end-stage renal disease. In children with high-grade VUR, long-term scarring is detected at a 4- to 6-fold

greater rate than in children with low-grade VUR and at an 8- to 10-fold greater rate than in children without VUR.
