Dislocation. You will  
know immediately if your  
SC joint has dislocated.

Dislocation causes severe pain that gets worse with any arm movements. In anterior dislocation, the end of the clavicle juts out near the sternum. This causes a hard bump in the middle of the chest. In posterior dislocation, a bump is usually not obvious.

breathing difficulties or chest injury. Also, make sure that you don't leave the muzzle on too long. Some muzzles prevent a dog from panting, which it must do to avoid overheating. Muzzles left in place too long can also injure the dog. Finally, a

dog that vomits while wearing a muzzle is likely to aspirate the vomit.

## Management

A sternal fracture is a fracture of the sternum (the breastbone), located in the center of the chest. The injury, which occurs in 5–8% of people who experience significant blunt chest trauma, may occur in vehicle accidents, when the still-moving chest strikes a steering wheel or dashboard or is injured by a seatbelt.

## **Sternum Dislocation Manual Guide**

An anterior dislocation of this joint means that the collarbone has popped out in front of the sternum. A posterior dislocation means that the collarbone has gone behind the

sternum. While both types of dislocations are very serious, a posterior dislocation can be a surgical emergency, as the end of the collarbone becomes extremely close to the airway and large blood vessels of the heart and chest.
